

Guiding line DURA TRIO

DURA TRIO is used to create guiding lines on pedestrian crossings.
It serves for the orientation of visually impaired persons.

ADVANTAGES

- Long durability
- Anti-slip surface: SRT>0,55 guarantees safety under wet conditions
- Perfect adhesion: strong joint of the ground material and the belt with the help of thermoplastic resin.
- Very fast application with minimum waste.
- Thanks to packing in roles, only necessary quantity can be used.
- Installation is simple, quick and cost effective (eliminates excavation)

APPLICATION

Ground surface

Matured bitumen or concrete surfaces.
Application is recommended 30 days after laying the new surfaces (if new asphalt or concrete roads are prepared).
Concrete surfaces are recommended to be treated with a primer before the application.

Application instructions

Installation by heating the bitumen surface in the bottom of the belt using a gas burner.
It is recommended to use protective equipment like safety goggles or gloves.

Conditions for application

Temperature: 0 to +40 °C

Basic components

Methacrylate resin, strengthened by high-strength fibers, with non-skid particles on the top and covered with bitumen surface in the bottom.

Dimensions and colours

Dimensions: 0,17 x 3 m
Colour: white
